As a long haul truck driver, having access to instant traffic & weather is of great benefit to me. I am an XM subscriber, paying \$10 per month. I am appalled that the NAB is attempting to limit the service that I can have access to.

Local radio is fine for someone who doesn't travel as many miles as I do, approx. 140,000+ miles per year. With satellite radio, I am able to listen to traffic & weather continually instead of waiting for terrestrial radio to broadcast the information between their regular programming. Being in a service oriented industry I am alerted quicker to weather & traffic changes and alter my route accordingly. Terrestrial radio cannot or will not provide this information in the same expedient manner.
